ASSOCIATION OF INDUSTRIAL MATHEMATICIANS / EINDHOVEN

We are looking for candidates to form a new Board and give new life to the Association of Industrial Mathematicians, Eindhoven

To all AIM/e members, residents, and alumni of Mathematics for Industry, Eindhoven Call for the new Board and a meeting

We would like to announce a call for new Board members of the Association of Industrial Mathematicians / Eindhoven. We believe that the association should be ran by active, creative, vigorous, and involved Board members, who maintain frequent communication with the MI program and TU/e.

The faculty of Mathematics and Computer Science of TU/e is bringing together the four alumni associations WIRE, VIE, AIM/e, and Xootic under one umbrella called MaCFAN (Mathematics and Computer Science Faculty Alumni Network).

MaCFAN offers the associations to keep their administration up to date, to arrange interesting activities for their alumni, and to provide facilities for the alumni-associations to organize local meetings. It is not meant to be a replacement; each of the four associations remains

alive, keeps its own activities, members, and board.

We would like to make the legal side of running the AIME association easier. On behalf of the current Board of AIM/e and the director of MI program, we suggest to turn the association into a subgroup of MaCFAN network under the same name, with the same goals, and a lighter administration.

The next activity organized by MaCFAN is a **New Year's Drink in the "Zwarte Doos" on the TU/e campus on Saturday, 16 January 2010, at 13.00**. We would like to invite all Mathematics for Industry residents and alumni to gather on **the same day at 12.00**, discuss the scenarios of running AIME, and select the new board. At 13.00 we join MaCFAN, drink to the New Year, and start planning new activities.

You are kindly requested to register for the meeting by sending an email to katya@vanillamodeling.com by January 5, 2010.

We hope that there is sufficient interest among you to make the association work better than ever. If you are interested in making a commitment of running the AIM/e towards bright future, please, send us an email. We are hoping to receive your comments and responses by January 5, 2010.

With Kind Regards and Best Wishes,

Katya Vladislavleva & Andriy Hlod,
(AIM/e Board), Stef van Eijndhoven
(Director of MI program)
