

# Stress Analytics in Education

Rafal Kocielnik, Mykola Pechenizkiy, Natalia Sidorova

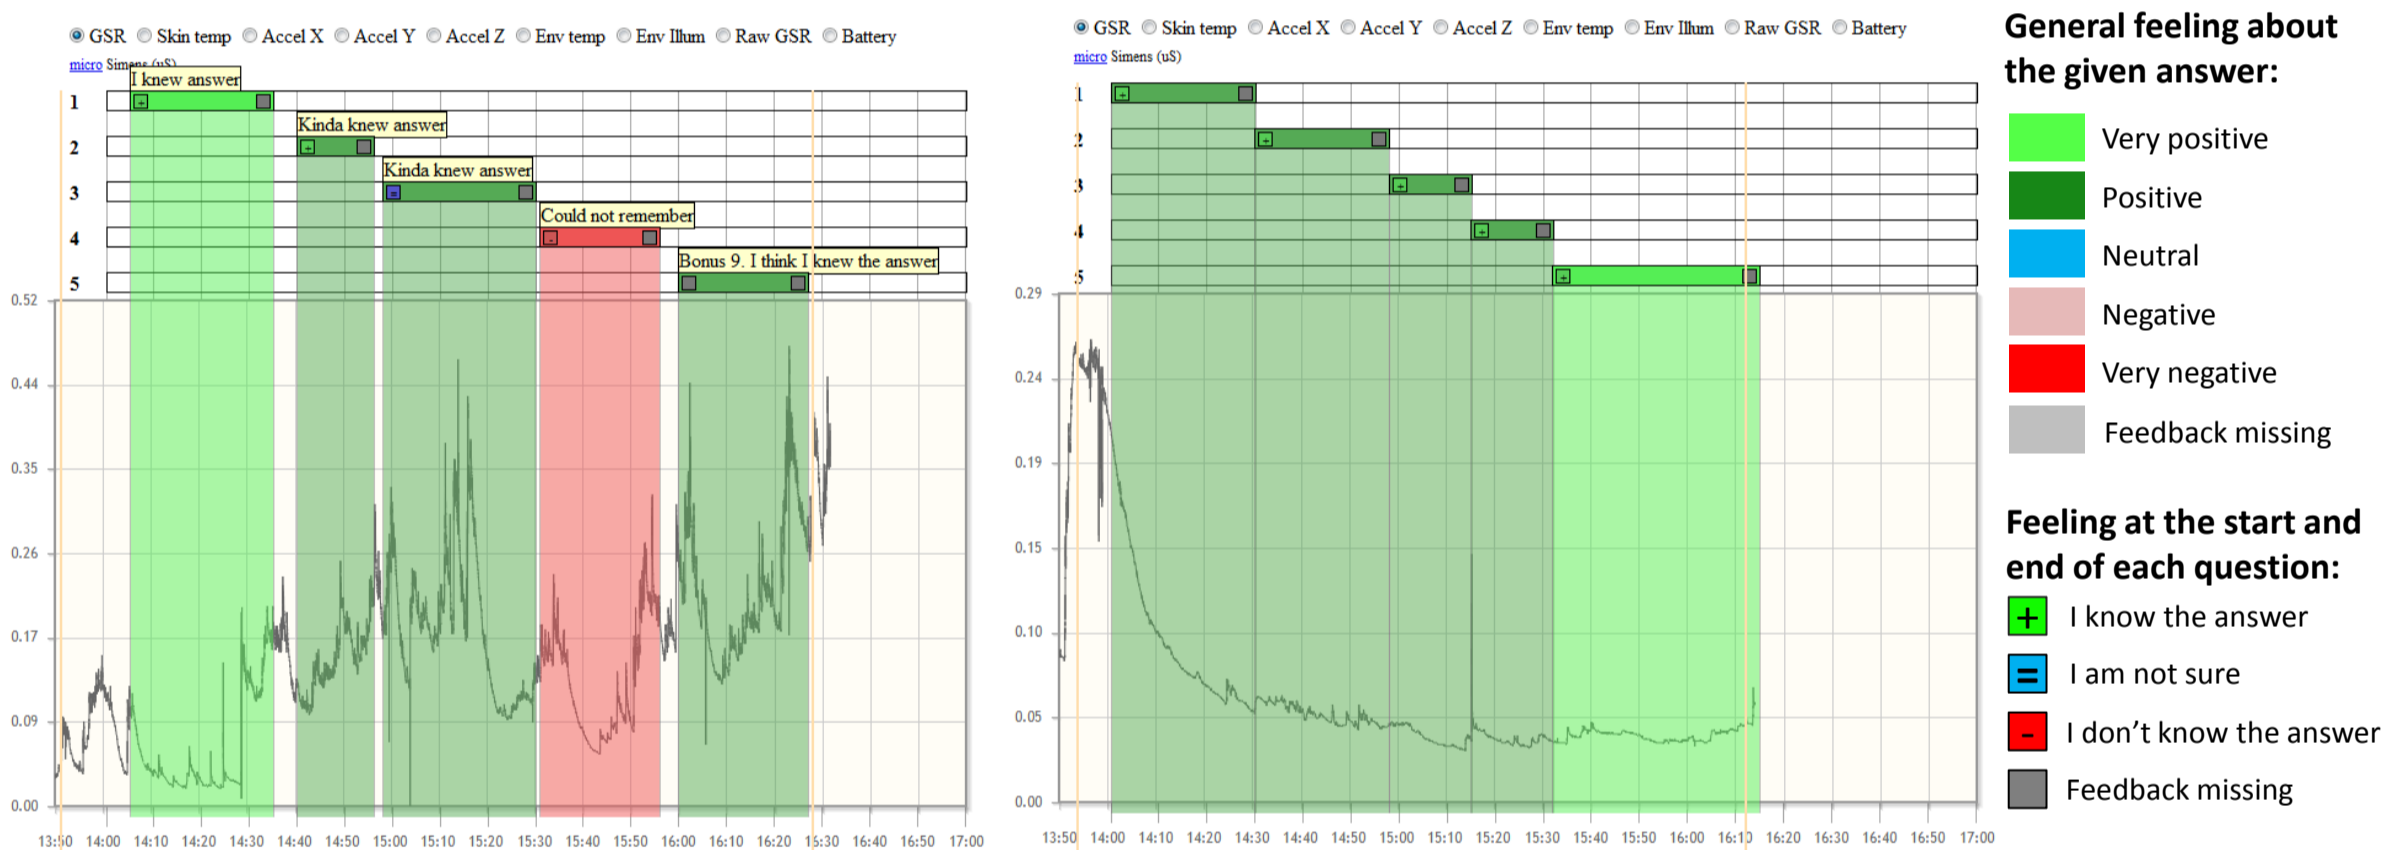

## Final project presentation session

### Study description:

Students gave group presentations of their final project from a study course. These projects were evaluated by the lecturer walking from one group to the other in a predefined order. They were also wearing the measurement device throughout the whole session and indicating their emotions using questionnaire.

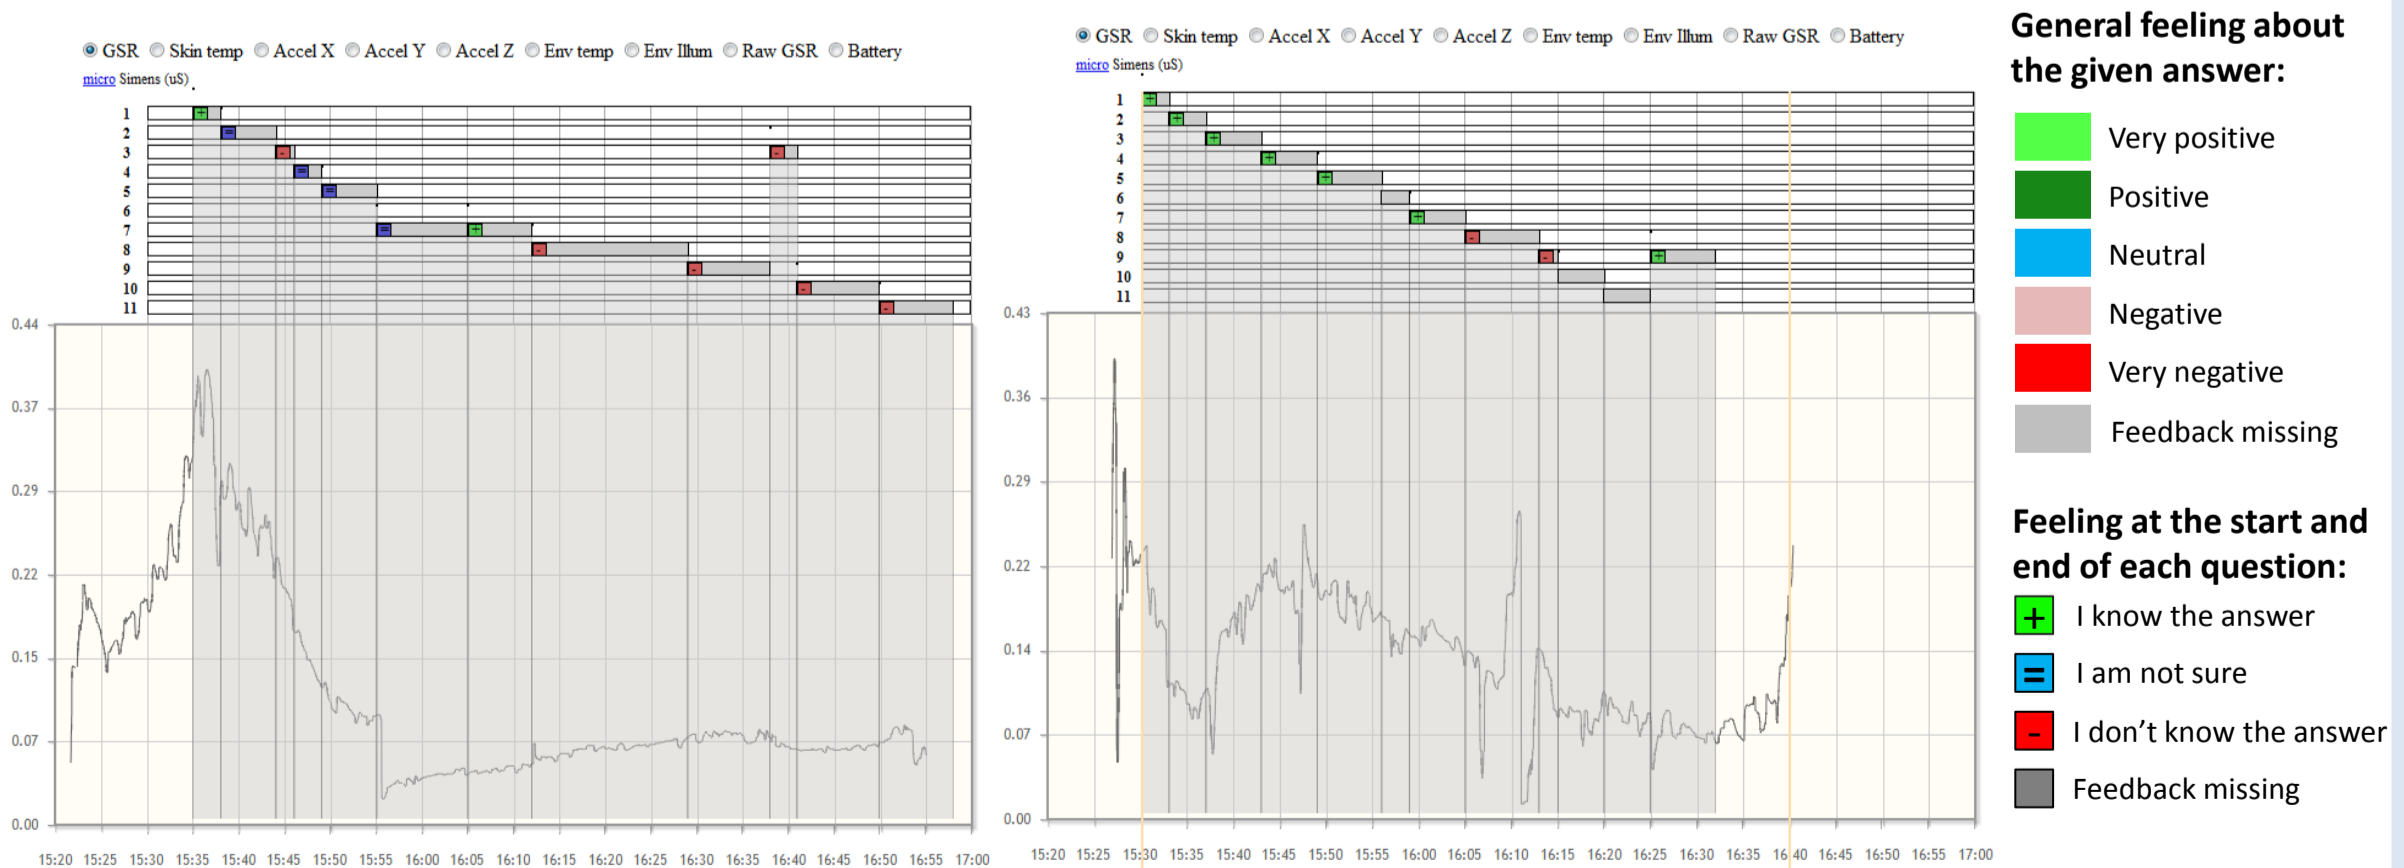

## Exam 1 – written, closed book exam

### Study description:

Students were taking a written exam from a study course. They had to answer 5 exam questions without using their computers or any other information sources. They were also wearing the measurement device during the whole exam and indicating which question they were working on at the moment.

## Exam 2 – computer based test

### Study description:

Students were taking a computer based test from a study course. They had to answer 11 test exam questions using their computers and any other information sources. They were also wearing the measurement device during the whole exam and indicating which question they were working on at the moment.
