Guidelines for the report of the RTA assignment
Reinder J. Bril

Abstract
The course Real-Time Architectures includes an obligatory assignment. You are expected to work in teams. This document provides some guidelines for the report that must be handed-in as part of the assignment for 2IN25: Real-Time Architectures (RTA).

Description

Delivery of the report
For 2009/2010, there are two examinations
1. Friday, January 22nd 2009, 9:00 – 12:00;
2. Friday, April 16th 2009, 9:00 – 12:00.
In order to pass for an examination of 2IN25, the assignment must be handed-in before that examination. Handing it in too late implies a failure for the exam.

Cover page
The cover page should at least contain the following information:
- title of the assignment;
- course code 2IN25;
- group-id;
- student names (incl. full initials), identifications;
- date.

Structure
The paper should at least contain:
- an abstract;
- an introduction;
- a number of sections constituting the main body;
- a conclusion;
- a list of references.

Make sure that:
- the abstract can be read in isolation;
- the introduction + conclusions can be read without reading the main body.

Address all relevant issues mentioned in the description of your assignment in the main body. Reflect on your work in the conclusion and on the material you examined. Please also address topics that popped-up during the discussion when you (and optionally other groups as well) presented the results of the assignment.

In the references section, provide complete information (follow standards, e.g. for a book: authors/editors, title, publisher, year; for a journal article: authors, title, journal title, volume, number, pages, month, year; for a webpage: URL). Avoid dangling sources (without references from the text).

Length and font-size
Preferably, the paper should consist of at least 5 and at most 10 pages (excluding the cover-page), using a font-size of 10 points.
