

Reading guide Real-Time Architectures 2006 - 2007

June 19th, 2007

Abstract

This note is a reading guide to the 2nd edition of the book of Buttazzo [1], identifying those parts that are to be studied for the examination. Note that in addition to the book, both the *slides* and the *articles* of the “Expected reading” on the web have to be studied as well! Moreover, it is strongly encouraged to take a look at the slides of Buttazzo [2] and the errata [3].

Introduction

Roughly speaking, Chapters 1 till 5, and 7, and Sections 8.1, 8.3.1 have to be studied. Chapters 1, 2, and 4 have to be studied entirely. Below, Chapters 3, 5, and 7 will be discussed in more detail.

Discussion by Chapter

Chapter 3

You should know that EDF is *optimal* for both independent tasks as well as tasks with precedence constraints for preemptive tasks with asynchronous activation. This implies that you have to study Sections 3.1, 3.3, and 3.5.2.

Chapter 5

To be studied, except for Sections 5.3.1, 5.3.2, 5.4.1, 5.4.2, 5.5, and 5.7.

Chapter 7

To be studied, except for Section 7.5.
